

FluClinic2You

Flu Vaccination Service
2024-25

It is estimated that sickness absence
caused by flu costs an employer

£522 per employee¹.

The flu vaccination costs

£16* per employee.

The flu is a common term known for the influenza virus - a highly contagious virus that causes respiratory diseases and other complications.

The most common symptoms of the flu are coughing, sneezing, fever, headaches, muscle pain and extreme fatigue.

How Does The Flu Affect The Workforce

The flu can affect the workplace in different ways which can affect both productivity and employment costs.

The World Health Organisation (WHO) estimates that up to 10% of the UK population can develop influenza each year. The seasonal influenza virus can affect all age groups and causes considerable morbidity and mortality².

31,200
hospital admissions
each year

24,800
deaths each year³

Minor illnesses (including colds, flu, stomach upsets, and headaches) are the most common cause of short term illnesses in organisations.

The Most Common Cause of Absence⁴

Costs of the flu to the workplace

A typical case of flu confines an employee to **THREE** to **FOUR** days in bed and reduced productivity for up to a week afterwards⁵.

This accumulates
to an average of
£522
in sickness
absence costs¹.

The average number of
absent days each year is
6.6 days
per employee⁴.

Flu vaccinations save
the UK economy up to
£28.9m
in sick day costs⁶.

4. CIPD. Health and Well-being at Work. 2018.

5. Szucs TD. The role of burden-of-illness research. Pharmacoeconomics. 1999; 16 Suppl 1: 27-32.

6. Personnel Today. Flu vaccination saves UK economy up to £28.9m in sick day costs. 2018.

Simple ways to prevent catching the flu virus

1. Having a flu vaccination each year.

The World Health Organisation (WHO) recommends that routine annual influenza vaccination is the most effective preventative measure available against flu infection and disease².

2. Washing your hands & Keep surfaces clean.

The Flu Vaccine

A new flu vaccine is developed each year against the most prevalent strains of the influenza virus.

It is important to get **vaccinated each year**.

The vaccine will help **prevent** people from **getting the flu, reduce the severity of symptoms** if they were to catch the flu and also **prevent transmission** of the influenza virus around the workplace.

Research shows that the vaccination helps prevent up to **626,000** cases of influenza per year in England⁷.

Flu Vaccination Options

Our recommendations are in line with WHO studies and Public Health England guidelines to ensure all our clients have the best level of protection against the flu this year.

1. Quadrivalent Vaccination (QIV) - for those aged between 18 and 64 years old.

2. The Adjuvanted Trivalent Vaccinations (aTIV) - for those aged 65 and older.
